

## How to Make Sinks Smell Fresh

Keeping drain smells fresh can be difficult, as odor and bacteria build up constantly in your sink drain. The cleaning ingredients you use will work through your drain pipes, and many commercial drain cleaners can be too harsh for certain types of drains. You can try to find a safe cleaning ingredient or use household items that are safe for any type of sink drain.

### Things You'll Need:

- Baking soda
- Vinegar
- Orange or lemon peels

1. Pour 1 cup of baking soda into your drain to neutralize odor.
2. Drizzle 1 cup of white vinegar into the sink drain as well. The vinegar deodorizes plus disinfects, creating a foaming action when mixing with the baking soda. This foamy mixture will work its way through the drain pipes, removing odor and bacteria.
3. Pour about a gallon of hot water down the drain after cleaning.
4. Run a bit of hot water at the disposal side and turn on the disposal. Squirt a bit of liquid degreasing dish soap in the disposal. This will foam up, sending good smelling, degreasing, hot water down the line. Rinse when finished. You do not need a lot...just a bit.

~~5. Grind orange or lemon peels in the garbage disposal for a citrus-fresh scent.~~

Do NOT grind any sort of peels...this only further pollutes the line with chunks of more debris...the less debris in the line the better.

Do NOT grind ice...Ice is very hard and can damage the disposal.
